

128 Technology Advanced Configuration

COURSE OVERVIEW

The 128T Advanced Configuration Training will teach students how to enable and configure advanced features on their 128Ts. These are features that are not necessary for a 128T deployment, but when activated, can be very powerful.

This course is designed for Network Architects or people responsible for developing their network topology and figuring out how to deploy their 128T routers. The 128T Configuration and Administration Basics Training is a prerequisite for the 128T Advanced Configuration Training.

OBJECTIVES

Upon completion of this course, the students should be able to:

- Configure an HA pair of routers
- Configure 128T router to interoperate with BGP Peers
- Learn how the 128T can perform Traffic Engineering
- Learn the role Host Services play within 128T

COURSE CONTENT

DAY 1

- High Availability
- BGP

DAY 2

- Traffic Engineering
- Application Classification
- Service Policies
- Host Services
